1. Claims 1-4 are pending in this application.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a specific L-sorbose dehydrogenase, does not reasonably provide enablement for the scope of the claimed subject matter. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and practice the invention commensurate in scope with these claims whereby the structure of the specific L-sorbose or the specific sequence is required in view of the fact that the prior art is within the scope of the claim enzyme as evidenced by US 6,242,233 which properties are within the scope of the claimed properties.

Applicant is required to submit claimed subject matter that differentiates between the prior art, which overlaps the instant claims due to differences between the two enzymes. If Applicant does not submit inherent limitations supported by the instant specification, this Examiner will consider that the instant specification is fatally defective lacking suitable enabling differences for the claimed enzyme over the prior art.

Art Unit: 1657

3. No anticipatory art has been found. In addition, the art of record do not suggest or motivate one of ordinary skilled in the art to recover Vitamin C from the fermentation medium based on US 6,242,233 as a direct synthesis without an additional step.

4. No claim is allowed.
